

There are many so solar companies saying

There are many so solar companies saying,

“We are the best” Why is Thermocell the only one who can say,

“We are the Best Choice” Innovative Technology

Thermocell manufacture the revolutionary ‘evacuated plate’

’s a high efficiency solar panel that was designed at Canterbury University by high profile renewable energy expert and company founder Professor Arthur Williamson.

Thermocell is the only company able to offer this advanced technology.

The panel maximises the benefits of both the common types of solar heating panels – ‘evacuated tube’ and ‘traditional flat plate’ models.

The Thermocell panel is designed to start operating at low temperatures and designed to fall just short of boiling the cylinder water, in doing so eliminating thermal stress on the hot water cylinder and components, reducing harm to the roof penetrations and doing away with the extra valving necessary to dump boiling water on to the roof and down plastic gutting.

Contemporary Design Art-Line is the ‘in roof’ option for new homes. It is the only true system on the market that is fully integrated into the roofline. This creates an effect that can’t be differentiated from a skylight. It has proven to be an excellent choice for those who want the benefits of solar heating but wish to keep the integrity of their roofline.” Mod-Line is the ‘on roof’ option. It is slim, modular and visually appealing. It is also very adaptable to a wide range of configurations ensuring that your system can be aligned to almost any roof geometry and can be colour matched to the roof. Or it is compact enough for easy concealment with the modern mono pitch roof designs Made in New Zealand The Thermocell panels and solar hot water cylinders are proudly designed and manufactured in New Zealand to suit our unique environmental conditions. Thermocell are members of the ‘Buy New Zealand Made’ campaign. Thermocell products, systems and installations comply with all relevant New Zealand standards. Proven Company

Thermocell have been helping New Zealanders save energy costs and the environment for over 25 years. During 2007 Thermocell produced their 7000th panel. Thermocell have stood the test of time. Qualified Installers

Thermocell use experienced fully qualified ‘Craftsman Plumbers’ or ‘Registered Plumbers’ to install and commission our solar systems. Thermocell installers have also completed EECA’s solar training course. Size does matter

Thermocell panels are always specified on the generous size to ensure customers aren’t disappointed with their solar system. If you are looking at other solar systems always compare the square metre of collector area on offer. Remember the Thermocell panel is a high efficiency panel. Discolouration Thermocell panels are designed and manufactured to strict specifications and are not prone to discolouration or rust. Customer Service Thermocell are on call by phone or at their showroom. Qualified staff are ready to discuss solar systems and what is best to suit your needs. Warranty Panels manufactured from the 1st January 2008 now carry a 12-year warranty period. Thermocell can offer the long warranty period because they have built up an extensive history of our solar panels operating under New Zealand’s extreme environmental conditions. (Other system components subject to manufacturer’s warranty) Further More Thermocell offer a full turnkey service including; design, quote, supply, install and commission. They are very experienced and have established procedures for interfacing with Architects, Builders, Project Managers and end user Customers to ensure a seamless process from order to commissioning.

Thermocell also offer the design, supply, install and commissioning of solar electric systems.
